GET BACK TO WORK SAFELY AND WITH CONFIDENCE

Facing the continued threat of COVID-19, employers, schools, and other institutions are implementing plans to resume operations while mitigating the risk of exposure and transmission of the coronavirus. One strategy that is being widely explored is the use of thermal cameras to help conduct daily temperature checks. But do these solutions really work? Can they accurately detect a fever and help prevent infected individuals from entering the facility?

CDW gets that organizations need to get back to work or school quickly and safely, and stay back. Thermal screening is one tool that can help you accomplish this goal. Join one of our upcoming webinar sessions and hear CDW experts deliver straight talk about how these technologies work and how to best put them to work for you.

UPCOMING SESSIONS

In response to the heightened urgency around this topic and volume of interest, CDW is offering several sessions over the coming weeks.
